*Seattle, WA, September 8, 2011* – Tools4ever, the market leader in Identity and Access Management solutions, is pleased to announce that it has published a white paper about Single Sign On (SSO). Organizations are faced with complex networking challenges; everything from ensuring security to ease of use. IT managers are responsible for ensuring there is a productive network in place. What is often forgotten or set aside for future projects is SSO implementation. Tools4ever's white paper addresses the advantages of an SSO implementation and how its Enterprise Single Sign On Manager (E-SSOM) can help solve these issues.

An SSO solution will require users to only have to log in to an SSO application solution once, after which it will automatically handle the subsequent login procedures. A robust solution can take this one step further by expanding SSO with authentication management. Then the login credentials are no longer based on a username and password, but are replaced by a combination of a smartcard and PIN code. This means users will no longer have to remember complex passwords, but still have immediate access to all applications across the network using a smart card and PIN code.

Tom Mowatt, Managing Director of Tools4ever – Seattle, comments; “By publishing this single sign on white paper we continue to provide insight and information about identity management issues organizations are faced with on a daily basis. And because Tools4ever is an expert in the identity and access management industry we are able to provide solutions that address these issues with quick ROI.”
